

LAUNDRY TROLLEY W/MOBILE BOTTOM

COD. 2030

Trolley with mobile bottom that raises or lowers gradually and automatically according to the load put inside or taken out; made of anodised light alloy.

The mobile bottom is operated by a galvanized harmonic steel spring, set in proportion to the weight and the volume of the load.

The bottom stays in horizontal position even though the load is not uniformly distributed thanks to a pantograph made of galvanised steel.

The spring range indicates the maximum load that can be contained in the trolley: when the bottom reaches the dead center, no further lowering is allowed.

4 casters in grey non-marking rubber.

Dim.1520x950x860 h mm

Position 1
